

## SolarTech Power Solutions

# 10kw mobile energy storage power communication BESS

## Overview

---

Why should you choose a Bess energy storage system?

The mobility and flexibility of the system enables novel applications and deployments where BESS previously were unused due to the non-flexible solutions. The system is modular, meaning that the energy storage capacity can be quickly adapted depending on the application case, in contrast to larger and bulkier solutions.

How much power does a Bess have?

The system is built of two main blocks. The PCS building block, responsible for the main control of the mobile BESS. The nominal power rating of the PCS block is 225 kVA, with a maximum peak power in the peak shaving mode of 275 kW . The second block is the modular battery pack.

What does Bess stand for?

de stem—1.Introduction Reference Architecture for utility-scale battery energy storage system (BESS)This documentation provides a Reference Architecture for power distribution and conver ion – and energy and assets monitoring – for a utility-scale battery energy storage system.

What is Bess ion & energy and assets monitoring?

ion – and energy and assets monitoring – for a utility-scale battery energy storage system BESS). It is intended to be used together with additional relevant documents provided in this package.The main goal is to support BESS system designers by showing an example desi.

What is a Bess battery?

BESS consist of one or more batteries and can be used to balance the electric grid, provide backup power and improve grid stability. Stay ahead with Siemens Energy long-term, flexible and sustainable Qstor™ innovations based on proven power electronics to shape future grids. What does Qstor™ bring to

your system?

.

What are the environmental conditions of a mobile Bess system?

Due to the flexible and mobile nature of mobile BESS, the environmental conditions can differ greatly for each system depending on the respective mobile deployments. Ranging from high temperatures and high humidity to the inverse during the same season, monitoring and control of the TMS is critical.
