16 battery cabinet UPS installation precautions

Overview

How do I install a UPS battery cabinet?

The screws to be used are the M4 (12 pcs). Insert the UPS into the rack and tighten the provided four screws. The screws to be used are the M5 screws. Read the safety instructions on chapter 2 before installing the battery cabinet. Connect the 1st battery cabinet to the UPS using the previous instructions.

Can a battery cabinet be repaired?

No part of the battery cabinet can be repaired by the user. Extraordinary maintenance operations must be carried out by LEGRAND Technical Support Service personnel. This product should be installed in compliance with installation rules, preferably by a qualified electrician. Incorrect installation and use can lead to risk of electric shock or fire.

What temperature should the ups be plugged in?

Position the UPS in an environment with a temperature range between +20°C (+68°F) and +25°C (+77°F) to guarantee the optimum life of the batteries. Make sure that the UPS is turned off and the both the UPS and the battery cabinet are completely disconnected from the AC power before carrying out and maintenance, battery replacement or repair.

What precautions should be taken when working on batteries?

The following precautions should be observed when working on batteries: remove watches, rings, or other metal objects. use tools with insulated handles. wear rubber gloves and boots. do not lay tools or metal parts on top of batteries. disconnect the charging source prior to connecting or disconnecting battery terminals.

Can I open or disassemble the battery cabinet?

Do not attempt to open or disassemble the battery cabinet; there are no user replaceable parts. Opening the case will void the warranty and introduces the

risk of electric shock even when the mains plug is disconnected. The battery cabinet has dangerous voltages on its input and output connections.

How often should a UPS battery be charged?

The battery installed inside the cabinet is lead/acid sealed and does not require maintenance (VRLA). The battery should be charged for 8 hours every 3 months by connecting the UPS to the mains supply socket. Repeat this procedure every two months if the storage ambient temperature is above +25°C (+77°F).
