Add one more photovoltaic panel to power

Overview

You can expand your solar capacity in three main ways: completely rebuilding your system from scratch, installing a separate independent system that runs alongside your existing solar panels, or adding panels to your current setup. Can I add solar panels to my existing solar system?

It's relatively easy to add panels to an existing system; many of the more difficult steps, such as tying your system to the grid, will already be complete. You can explore several options for a system upgrade, depending on your available roof space and the specifications of your solar system.

Can I add more solar panels if my roof is old?

Do not add more solar panels to your system if your roof is old, it is a leased system, or if you do not have enough roof space for extra panels. Contact your original solar installer to add more panels to your system. Why add solar panels to an existing solar system?

.

Can I add more solar panels to my home?

Most of the time, you can add more solar panels to your home. The economics will probably look a lot different then the first time you went solar. (And if you live in a state like California that upended its solar incentives, you're probably better off leaving your old setup alone.).

Should you upgrade your solar system with a single inverter?

If you're using a single inverter, you may be limited in what panels you can use to keep your system running efficiently and smoothly. When upgrading your solar system, you're almost always better off using panels identical to those in your existing system.

Can I install more solar panels on a new rack?

If you have additional roof space with good sun exposure, it's relatively simple to install more solar panels on a new section of rack. These additional panels can usually be tied into the existing string, giving you more solar capacity without any major changes to your current system.

Do solar panels increase electricity use?

In many cases, you may see an increase in your electricity use after installing your solar panels. The thought of producing "free" electricity tends to make solar customers more relaxed about their energy use. If you start leaving your lights on more often, you may want to install more panels to account for the additional usage.
