Benefits of Stockholm shopping mall photovoltaic curtain wall

Overview

What are the benefits of a photovoltaic curtain wall?

It also improves the aesthetic appearance of the building. A photovoltaic curtain wall has the added benefit of generating electricity over the building's life. Whilst it costs a bit more than standard curtain walling, the incremental cost of a BIPV facade will typically be paid back within around five years.

What is photovoltaic curtain wall?

Photovoltaic Curtain Wall generates energy in the building implementing solar control by filtering effect, avoiding infrared and UV irradiation to the interior.

Does Stockholm Water Front use a lot of energy?

Stockholm Water Front consists of three buildings with completely different energy requirements. The office building doesn't use much energy in the evening and at night, while the hotel has its highest energy consumption in the morning and evening.

Which solar cells are used in photovoltaic curtain wall?

At present, crystalline silicon solar cells and amorphous silicon solar cells are mainly used in photovoltaic curtain wall (roofing) systems. Photovoltaic glass modules have different color effects depending on the type of product used.

What are the benefits of a curtain wall?

Standard curtain walling improves the thermal insulation of the building, leading to reduced HVAC costs and reduced heat loss. It also improves the aesthetic appearance of the building. A photovoltaic curtain wall has the added benefit of generating electricity over the building's life.

Why is the curtain wall market growing?

Research indicates the market for curtain walling is growing at a healthy rate

of around 6% per annum. (A curtain wall is the non-structural weather proof covering of a building, generally associated with large multi-storey buildings.) This rise is driven both by new build construction and by energy efficient refurbishments of existing buildings.
