

## SolarTech Power Solutions

# Bess system for solar factory in Brisbane

## Overview

---

How much power does a Bess facility deliver in Queensland?

BESS facilities in Queensland (in operation, under construction, and proposed for development) have the ability to deliver between 10 – 500 megawatts (MW) of power and play a crucial role in stabilising the energy network.

Where will a Bess campus be located in Australia?

The first sites planned to host the new solution include Quinbrook's Supernode site in Brisbane which already hosts Australia's largest BESS campus. Quinbrook also has multiple sites that are strategically proximate to heavy industry in Gladstone as well as the planned Lansdown Eco-Industrial Precinct in Townsville.

What is Bess technology?

BESS technology is continuously evolving, with advancements in battery chemistry and system integration. Supplier research and development is focused on improving energy density, product lifespan, noise emissions, safety, and repurposing and recycling.

What is Queensland's biggest battery energy storage system?

Stage one will be the construction of one of Queensland's biggest Battery Energy Storage System (BESS). The BESS will have a 250MW/2hr capacity and will enable the efficient storage of surplus solar and wind energy, aid the displacement of coal and other emissions-intensive generation sources.

Is Blackstone Queensland's largest Bess project?

Capable of powering 70,000 homes, Blackstone is currently Queensland's largest BESS project and the approval progresses Octopus's renewables strategy to develop large scale energy storage in strategic locations across the National Electricity Market (NEM).

What is Bess & how does it work?

The BESS facility will enable the efficient storage of surplus solar and wind energy, helping to displace coal and other emissions-intensive generation sources. Origin Energy has committed to the full capacity of the first stage of the project under a recently completed agreement.
