Blown fuse in circuit breaker in New-Zealand

Overview

What causes a fuse to blow?

Faulty appliances can also cause a fuse to blow or a circuit to trip. They design a circuit breaker to trip in the event of an overload to prevent circuit wires from heating to dangerous levels. Other reasons that can cause a blown fuse are ground fault, power surge, short circuit or arc fault. Identify Blown Fuse or Tripped Circuit.

What happens if a circuit breaker blows a fuse?

Each fuse or circuit breaker corresponds to a different area of wiring in your home. In the event of an electrical fault the fuse will blow or the circuit breaker will trip. The power to the corresponding area of the house will be shut off, to prevent overloading or fire.

What causes a blown fuse or tripped circuit breaker?

There are many possible causes for a blown fuse or tripped circuit breaker. The most common cause is an overloaded circuit. This occurs when too many devices, lights or appliances are operating at the same time. Your circuit is actually designed to trip in the case of an overload in order to prevent circuit wires from heating to dangerous levels.

What should I do if my switchboard fuses are blown?

If you have an older switchboard with fuses or you are experiencing regular circuit outages - "blown fuses", detect burning smells, or notice signs of deterioration, such as scorching, rusting or corroding around your circuit breaker- call AB Electrical immediately. Ignoring electrical failure can cause fires and other home-threatening problems.

What is a blown fuse?

Most people nowadays have had the old-fashioned fuse panels (also known as fuse boxes) in their homes replaced by modern electrical panels with circuit

breakers. Yet people commonly use the expression “blown fuse” to describe just about any unexpected electricity-related occurrence, especially one involving a loss of power.
