British power signal tower base station

Overview

What is the British power signalling Register?

The British Power Signalling Register represents a condensation of many decades of recording and research by a large number of signalling enthusiasts and industry professionals, and has been fully peer-reviewed by signalling historians and signalling engineers.

Where is Battersea Power Station?

TOO LONGBattersea Power Station is a decommissioned coal-fired power station, located on the south bank of the River Thames, in Nine Elms, Battersea, in the London Borough of Wandsworth. It was built by the London Power Company (LPC) to the design of Leonard Pearce, Engineer in Chief to the LPC, and CS Allott & Son Engineers.

How many power stations are there in Battersea?

Located on the south bank of the River Thames, in Nine Elms, Battersea, an inner-city district of South West London, the building comprises two power stations, built in two stages in a single building. Battersea A Power Station was built in the 1930s and Battersea B Power Station, to its east, in the 1950s.

How much power does London's B station generate?

The construction of the B Station brought the site's generating capacity up to 509 megawatts (MW), making it the third largest generating site in the UK at the time, providing a fifth of London's electricity needs (with the remainder supplied by 28 smaller stations).

Who designed Battersea Power Station?

How do base stations work?

Base stations transmit and receive radio waves to connect the users of mobile phones and other devices to mobile communications networks. The strength of the radio waves from base station antennas reduces rapidly with increasing distance and the levels at locations where the public can be exposed tend to be small.
