**Can I open the battery cabinet  
after the UPS is turned off**

## Overview

---

Work should be done after breakers are switched off, and the power is turned off. Use insulated tools suitable for working on batteries. Can UPS batteries be installed outside?

UPS batteries should never be installed outdoors where they can be exposed to the damaging effects of sunlight. IEEE 1635/ASHRAE 21 is a good engineering reference for designing properly ventilated battery rooms and cabinets. Lead-acid batteries contain substances that are not good for the environment in which we live.

Do I need to turn off my ups?

No, you do not have to. UPS will have to charge it's internal battery and these should happen at the back end. Turning it off may result in the battery not being fully charged and not ready for the next use. Most modern UPS have a very wide range of safety circuits built into them.

Are ups and battery cabinets dangerous?

The UPS and/or battery cabinets might be configured to look like standard computer equipment racks. There are two primary hazards of concern: electrical and fire. Open rack batteries expose potentially lethal voltage to any person coming in contact with them.

Can a ups be installed in a computer room?

Smaller UPS systems (e.g, up to 250 kVA) are commonly installed directly in the computer room along with their respective battery cabinets. The UPS and/or battery cabinets might be configured to look like standard computer equipment racks. There are two primary hazards of concern: electrical and fire.

Do battery cabinets need to be in a battery room?

Because cabinets can have locked doors, the cabinets do not have to be in

battery rooms; they can be installed directly adjacent to the UPS system and/or the information technology equipment. This eliminates the need for long dc cabling. Battery cabinets can be made to be indistinguishable from IT equipment cabinets.

Should a ups be plugged in or left turned on?

UPS units should be plugged in and left turned on at all times. Unfortunately, powering off the UPS each day will cause the UPS battery to age faster than if you leave it powered on at all times. If the UPS runs a self test each time it powers on like all APC UPS units do, the UPS will run on battery each time you power it on.

## Can I open the battery cabinet after the UPS is turned off

---

### How Battery Racks And Cabinets Can Help You Store Batteries ...

To function properly, battery cabinets must take into account temperature and any off-gassing from the battery, among other things. Any battery system installed in a seismic area should be ...
