How do you use a 60v battery?

My routine is to take a fully charged 60v battery (~64v) and run it for a few minutes in my Greenworks lawnmower. That usually shows up as 61.5v or less on my VOM. Then it's plug 'n play with the e-bike. I would prefer to streamline my process: just take a fully-charged 60v battery off my charger and plug it

into bike.

Does the motor matter if I use a 60V pack?

The motor doesn't matter. It all depends on the controllers max voltage limit. Most with an lcd display are limited to 60V max by the display and 63V max by the controller. You need to know the max voltage charge of your 60V pack to determine if it will work with your setup. What's the specs on the pack?
