Japan has around 2,000 agrivoltaics farms growing over 120 crops, including most vegetables. Soft fruits benefit highly from the protection of solar panels.

Do solar panels work for agrivoltaics?

Solar panels also protect crops from cold weather and create a favorable microclimate beneath them. To achieve success with agrivoltaics, careful consideration for solar panel placement is required. Grapevines do very well under solar panels, which also improves the quality of the grape. Orchards under solar produce bountiful and healthier fruit.

## Can vines grow under solar panels?

In Tressere, a region in Southwest France, vines successfully grow beneath a canopy of solar panels. They are suspended high off the ground on steel racking, allowing workers to tend to the vines. They also have a rotating mechanism that allows them to tilt and let more light reach the vines when they are overcast. The panels perform a dual role.
