# China s communication base station wind power trend

## Overview

---

Why is the power consumption of communication base station increasing in China?

With the expansion of communication service coverage and the updating of communication technology in China, the situation of inconvenient power supply of communication base station in remote areas and the sharp increase of power consumption of the base station equipment is becoming more and more prominent.

How big is China's Wind power?

This is roughly four times the global average for capacity under construction (9%). China's wind capacity follows a similar rate of growth as solar, according to Global Energy Monitor's Global Wind Power Tracker, with over 590 GW in prospective phases — nearly 530 GW of onshore capacity and 63 GW of offshore capacity.

Does China have a natural advantage of offshore wind power?

China has the natural advantage of developing offshore wind power, with a coastline of 18,000 km and a useable sea area of more than 3 million square kilometers, and abundant offshore wind energy resources. In 2021, the cumulative installed capacity of offshore wind power was 26.39 GW, with 16.9 GW newly installed (Chen, 2011; Liu et al., 2021).

Is China a global leader in offshore wind?

China has established itself as the global leader in offshore wind through rapid and large-scale development. In 2024, China added 4.4 GW of offshore wind capacity, accounting for nearly 55% of all global additions that year. China's offshore wind capacity grew from less than 5 GW in 2018 to 42.7 GW by March 2025.

How big is China's offshore wind powerhouse?

Of this, 510 GW is already under construction, primed to be added to China's 1.4 TW solar and wind capacity already in operation. As of March 2025, China has emerged as the world's offshore wind powerhouse — growing from under 5 GW in 2018 to 42.7 GW in 2025 (50% of global capacity).

How much wind power does China have in 2021?

In 2021, onshore wind power added 30.67 GW and offshore wind power added 16.9 GW. Provinces and regions with large new installed capacity included Jiangsu (5.02 GW), Guangdong (4.69 GW), and Henan (3.22 GW). By the end of 2021, the grid-connected wind and PV power installed capacity reached 328 GW and 306 GW respectively.
