The IMDG Code Amendment 42-24 is the cornerstone of the updated regulations, bringing significant changes to the classification, packaging, and handling of lithium-ion batteries and their associated technologies. Are battery energy storage systems safe aboard ships?

In recent months, Gard has received numerous inquiries about the safe transportation of battery energy storage systems (BESS) aboard ships. This article addresses some of the key risks, regulatory requirements, and recommendations for shipping such cargo.

What are EV battery warehousing safety regulations?

EV battery warehousing safety regulations are designed to mitigate the unique risks associated with storing large quantities of lithium-ion battery packs. These regulations typically cover several key areas: Requirement: Maintaining specific room temperatures and humidity ranges for battery storage.

What are the requirements for lithium ion battery storage?

These regulations typically cover several key areas: Requirement: Maintaining specific room temperatures and humidity ranges for battery storage. The optimal storage temperature for lithium-ion batteries is within the recommended temperature range (typically 15°C to 25°C) to preserve battery life and reduce the risk of thermal runaway.

Is there a need to consolidate standards & regulations for battery shipments?

There is definitely a need to consolidate norms and regulations. Furthermore, there is a need to consolidate safety testing requirements for battery shipments that not only cover cells, but the batteries themselves and the products (equipment, systems).

Are lithium-ion batteries safe to transport?

To address these concerns, the United Nations (UN) has established the UN Model Regulations for the transport of dangerous goods. Within these regulations, UN3536 specifically addresses lithium-ion battery installations in transport. Compliance with UN3536 is a mandatory requirement for the safe and legal transport of containerised BESS units.

What is a battery energy storage system?

Battery energy storage systems (BESS) are the most common type of ESS where batteries are pre-assembled into several modules. BESS come in various sizes depending on their application and their usage is expected to rise considerably in coming years.
