Group Photovoltaic Glass Project

Overview

What is Jinjing Malaysia group Photovoltaic Glass project?

On January 22, 2022, Jinjing Group has taken a step forward in its historic development. Jinjing Malaysia Group photovoltaic glass project held the ignition and commissioning ceremony in Gulin high tech park, Kedah, Malaysia. The project programme includes: A photovoltaic backplane production line with a daily melting capacity of 600 tons.

What is a photovoltaic patterned glass kiln?

A photovoltaic front panel production line with a daily melting capacity of 600 tons. A photovoltaic patterned glass production line with a daily melting capacity of 800 tons. The fire of its glass kiln is from the fire of Jinjing Shandong Boshan, which originated from the first flat glass kiln in China.

Why is a special pattern used for solar glass production?

For the production of solar glass, a special pattern is used so that sunlight falling in the module is focused towards the solar cell and thus increasing the efficiency of the module. Nowadays, melting furnaces with up to 1,200 tons of glass melting capacity are installed in new and more advanced pattern glass lines.

Why is a pattern glass production facility being built in China?

19.07.2021 - Environmental protection: With support of Grenzebach, pattern glass production facilities, specially to manufacture solar panels, are being built in China. China shares the worldwide goal to protect the environment, reduce CO2 emissions, and focus on renewable energies.

Is Grenzebach ready for a high demand for solar glass?

This implies a sharp increase in demand for solar glass, and the glass manufacturer will have to respond to it. In China alone, the installation of more than 160 pattern glass lines specifically for the solar market is planned.

Grenzebach is well prepared for this immense demand.

How will China respond to a growing demand for solar glass?

To do this, China is rapidly ramping up wind and solar farms, among other things. From 2021 to 2030, the government plans to add 80 to 160 gigawatts of solar capacity annually. This implies a sharp increase in demand for solar glass, and the glass manufacturer will have to respond to it.
