How big should a solar inverter be?

Generally, it's recommended to size the inverter to 80-100% of the DC system's rated capacity. Before determine the inverter size, the most important thing is to calculate your average daily power consumption (kWh) and calculate your solar panel array size to match your power consumption. You could follow our to make this estimation.

How do I choose the right inverter size?

Here is our last bit of advice on how to select the correct inverter size: Check our inverter size chart. List all your appliances in the function of their power output.
