# How many watts is a portable power bank

## Overview

---

How many watts can a powerbank provide?

For example 18W powerbank can provide 18W for 1 hour, or 1W for 18 hours. Some larger devices, like laptops may require a higher power supply, meaning you should use a powerbank with more watts. In other words, more watts also means a faster charge. Advanced powerbanks can automatically change available output voltage and amperage levels.

What does Watts mean on a powerbank?

The number of watts stands for a total energy that powerbank can output at a given time. For example 18W powerbank can provide 18W for 1 hour, or 1W for 18 hours. Some larger devices, like laptops may require a higher power supply, meaning you should use a powerbank with more watts. In other words, more watts also means a faster charge.

What is the capacity of a power bank?

The capacity of a power bank is measured in milliampere-hours (mAh) and represents the amount of charge it can hold. The higher the mAh rating, the more charge the power bank can store, and thus, the more times it can recharge your devices.

What is a power bank WH?

Wh, short for Watt-hours, is a unit of measurement used to quantify the amount of energy a power bank can store and deliver. It represents the power (in Watts) multiplied by the time (in hours) that the power can be sustained. Essentially, Wh measures the capacity of a power bank and indicates how much energy it can provide to charge devices.

How much energy does a power bank use?

Power banks typically operate at 85-90% efficiency due to energy loss during conversion. Calculate the effective Wh by multiplying the stated capacity by

the efficiency level (e.g., a 100Wh power bank with 90% efficiency effectively provides 90Wh). Therefore, understanding these levels guarantees you obtain maximum utility from your device.

What wattage power bank should I buy?

Higher-wattage power banks tend to be larger and heavier, which can be inconvenient for users who prioritize portability. If you need a lightweight power bank for occasional smartphone top-ups, something in the 10W to 18W range will be more than adequate.
