For those of you who don't know much about super capacitors, here is a little bit of fun theory: Super capacitors act like any other kind of capacitor, only they can store tremendous amounts of energy. Many capacitors that you'd have seen in audio circuits have capacitances such as 470uf or 680uf (micro

farads).

How many times more energy can a super capacitor store?

A one farad super capacitor can store one million time more energy at a common voltage, than a 1uf capacitor, one billion times more than a 1nf capacitor, and one trillion times more than a 1pf capacitor. Cool, huh?

However, super capacitors have very small voltage ratings, such as 2.5v, 2.7v and 5.5v (Some common values).
