How to invest in battery cabinets

Overview

Do battery storage assets have value on the grid?

“When the battery storage assets detected that drop in frequency, they ramped up their output milliseconds later,” explains Markuz Jaffe, an investment companies analyst at Peel Hunt. “This really speaks to the value they have on the grid.”.

How many GW of battery storage will the UK have?

By the end of the decade, the consultancy Rystad Energy predicts that the UK will have some 24 gigawatts (GW) of battery storage installed – with enough energy in reserve to power 18mn homes for a year.

Are battery funds a good investment?

As it stands, battery funds already have a relative lack of revenue security compared with other renewables trusts, for whom at least two-thirds of revenues are typically fixed. Stifel thinks the battery sector's attraction to investors would "increase meaningfully" if 30-40 per cent of revenues could be fixed for longer periods.

How do batteries make money in power markets?

Batteries make money in power markets through arbitraging the value between charging and discharging power. The greater the difference between high and low power prices across the day, the larger the profit for a battery asset.

Are batteries going to arbitrage?

A strategy involving high amounts of cycling may yield higher profits but will also reduce the expected lifetime of the battery. We consider two key markets that batteries are likely to arbitrage, the Balancing Mechanism (BM) and the wholesale market.

How can retail investors benefit from the battery boom?

There are currently a handful of ways for UK-based retail investors to gain exposure to this prospective battery boom. Smart Metering Systems (SMS) derived around 12 per cent of cash profits (Ebitda) from its battery storage assets last year, a proportion that's likely to grow in the future.
