# How to return batteries to the battery cabinet

## Overview

---

### Can I return a car battery?

Depending on the store and its policies, you may be able to return a car battery within a certain timeframe or under certain circumstances. For example, some stores have a 30-day or 60-day return policy for car batteries, while others may require the battery to be unused and in its original packaging.

### How do you store a loose battery?

The best option for loose batteries is to store them in a way that allows them to lay side-by-side. Batteries are a choking hazard, especially coin cells and other small batteries. They should always be stored in a place that is out of the reach of toddlers and small children.

### Can you return a battery if it's unused?

Generally, if the battery has been installed, it's considered used. Most stores require the battery to be in new and unused condition for a return. But if there's a defect, your warranty might cover it. Check the store's policy and your warranty terms for clarity.

### Where can I recycle a battery?

Many supermarkets and stores also offer battery recycling bins. Prepare Batteries for Recycling: Ensure that the batteries are not damaged or leaking. If they are, they should be handled with care, preferably wearing gloves, and placed in a separate bag.

### What should I do if I don't have a battery in my bag?

To prevent this from happening, you're better off leaving the batteries in their original packaging or a dedicated battery organizer, as mentioned earlier. But if you don't want to part with your bag/bin of batteries, be sure to cover the terminals with electrical, duct, or masking tape to isolate them.

Can you put a battery in a refrigerator?

For most consumers, the refrigerator is not worth the risk of water damage and the inconvenience of waiting for batteries to warm up before use. Do not put a battery in a freezer unless the manufacturer recommends it. Traditional nickel-based batteries lose their charge quickly even at low temperatures.
