Investment in peak-shaving energy storage systems

Overview

Is peak shaving a viable strategy for battery energy storage?

Amid these pressing challenges, the concept of peak shaving emerges as a promising strategy, particularly when harnessed through battery energy storage systems (BESSs, Figure 1). These systems offer a dynamic solution by capturing excess energy during off-peak hours and releasing it strategically during peak demand periods.

Is peak shaving a viable strategy for grid operators?

If left unchecked, peak demand periods might see grid operators grappling with shortages that could surpass current levels by 10% or more. Amid these pressing challenges, the concept of peak shaving emerges as a promising strategy, particularly when harnessed through battery energy storage systems (BESSs, Figure 1).

Can peak shaving reshape the energy landscape?

By implementing innovative solutions such as peak shaving through BESSs, the energy landscape can be transformed. With potential reductions in peak consumption, significant cost savings, improved grid stability, and tangible environmental benefits, peak shaving demonstrates its potential to be a pivotal strategy in reshaping our energy future.

Why is peak shaving Better Than Load shifting?

Load shifting allows for demand flexibility without compromising continuity . However, peak shaving offers continuity and peak load reduction by storing energy off-peak for later discharge on a peak, thus lessening capacity charges while also providing an opportunity for energy arbitrage .

How does a Bess-enabled peak shaving system work?

These systems offer a dynamic solution by capturing excess energy during off-peak hours and releasing it strategically during peak demand periods. The

efficacy of this approach is illustrated by numerical examples, with instances of BESS-enabled peak shaving leading to a remarkable 15% reduction in overall peak electricity consumption.

Does es capacity enhance peak shaving and frequency regulation capacity?

However, the demand for ES capacity to enhance the peak shaving and frequency regulation capability of power systems with high penetration of RE has not been clarified at present. In this context, this study provides an approach to analyzing the ES demand capacity for peak shaving and frequency regulation.
