

## SolarTech Power Solutions

# Madrid Solar Power System

## Overview

---

Does Spain have a solar grid?

Spain's grid ran entirely on renewable energy for the first time on April 16, with wind, solar, and hydro meeting all peninsular electricity demand during a weekday. Five days later, solar set a new record, generating 20,120 MW of instantaneous power – covering 78.6% of demand and 61.5% of the grid mix. A BIPV solar facade in Madrid.

Does Spain rely on solar energy?

Investors and power companies said their doubts about the adequacy of the Spanish electricity system had been confirmed by the blackout. They do not question solar's essential role in the clean energy transition. But due to oversights or overconfidence, they say Spain has not adapted to its reliance on solar energy.

Is solar power a good investment in Spain?

Since he took power in 2018, energy developers have built solar parks, proved that power generation had attractive returns and pulled in capital from yield-hungry investors. In 2023 and 2024, Spain added more solar power capacity than any other European country except Germany, whose economy is more than twice its size.

Where is the largest photovoltaic solar self-consumption plant in Madrid?

The plant was inaugurated today by the Mayor of Madrid, José Luis Martínez-Almeida. The largest photovoltaic solar self-consumption facility in the capital is located on the roof of the main manufacturing building, extending over an area of 30,000 m<sup>2</sup> (equivalent to 4 football fields).

How has Spain impacted the Solar Grid?

“This transformation has pushed the grid to the limits of the generation mix,” said José Bogas, chief executive of Endesa, a big Spanish utility, in May. But,

he added, “we have continued to operate the system as we used to”. While Spain has championed investment in solar parks, the grid has been neglected.

Is Spain's solar energy boom a victim of its own success?

In some ways, Spain’s solar energy boom is a victim of its own success. In spring and autumn, the sun is still strong enough to maximise solar output, but mild temperatures mean consumers have no need for things like air conditioning or heating.
