Overview

How will new energy projects impact Iceland?

Further development of new major energy projects in Iceland is under way. Plans for the construction of new power stations take into account not only energy issues, but also the impact on nature, regional development, tourism and outdoor activities, employment, and on society at large.

What kind of power outlet is used in Reykjavik?

While you are there, stop by the Ice Wear store and pick up an authentic Icelandic wool sweater and say “hi” to the most popular Icelander in Reykjavik, Baktus the cat. The power outlets used in Iceland are Type F. This type of outlet is recessed; meaning the faceplate of the outlet is deeper in the wall.

Will Iceland be able to produce green electricity?

With regard to the Master Plan and increased demand for the competitive green electricity Iceland is able to produce, it is likely we will see numerous new power stations being constructed in the forthcoming years, with an installed power capacity of some hundreds of MW.

How is Reykjanesvirkjun power plant controlled?

The design of the power plant is such that it is generally controlled remotely from a control center in Svartsengi. Unlike the power plant in Svartsengi, Reykjanesvirkjun is only a power plant consisting of two 50 MW dual-flow turbines with sea-cooled condensers, but such a system was a novelty in Iceland at the time when the power plant was built.

Is Iceland a good place to invest in wind power?

In addition, Iceland may offer interesting possibilities for large-scale wind power generation. Further development of new major energy projects in Iceland is under way.

When did electricity production start at Reykjanesvirkjun?

Electricity production at Reykjanesvirkjun started in the month of May in 2006. Machine 1 was commissioned in the middle of May and machine 2 at the end of the same month. The design of the power plant is such that it is generally controlled remotely from a control center in Svartsengi.
