# Nigeria s new all-vanadium flow battery

## Overview

---

Will flow battery suppliers compete with metal alloy production to secure vanadium supply?

Traditionally, much of the global vanadium supply has been used to strengthen metal alloys such as steel. Because this vanadium application is still the leading driver for its production, it's possible that flow battery suppliers will also have to compete with metal alloy production to secure vanadium supply.

How much will flow batteries cost in the next 5 years?

The market for flow batteries—led by vanadium cells and zinc-bromine, another variety—could grow to nearly \$1 billion annually over the next 5 years, according to the market research firm MarketsandMarkets. But the price of vanadium has risen in recent years, and experts worry that if vanadium demand skyrockets, prices will, too.

Who invented all-vanadium redox flow batteries?

Skyllas-Kazacos et al. developed the all-vanadium redox flow batteries (VRFBs) concept in the 1980s . Over the years, the team has conducted in-depth research and experiments on the reaction mechanism and electrode materials of VRFB, which contributed significantly to the development of VRFB going forward , , .

Are all-vanadium RFB batteries safe?

As an important branch of RFBs, all-vanadium RFBs (VRFBs) have become the most commercialized and technologically mature batteries among current RFBs due to their intrinsic safety, no pollution, high energy efficiency, excellent charge and discharge performance, long cycle life, and excellent capacity-power decoupling .

How can vanadium redox flow batteries increase their share in energy storage?

Overcoming the barriers related to high capital costs, new supply chains, and limited deployments will allow VRFBs to increase their share in the energy storage market. Guidehouse Insights has prepared this white paper, commissioned by Vanitec, to provide an overview of vanadium redox flow batteries (VRFBs) and their market drivers and barriers.

What are all-vanadium redox flow batteries?

All-vanadium redox flow batteries use V (II), V (III), V (IV), and V (V) species in acidic media. This formulation was pioneered in the late eighties by the research group of Dr Maria Skyllas-Kazacos as an alternative to the Fe/Cr chemistry originally proposed by NASA.
