Onsite Energy Solar Charging Panel Two-in-One Cable

Overview

How to connect two solar panels to one battery?

When you want to connect two solar panels to one battery, you must first connect your battery to the charge controller. It is crucial that you do this step first. If you connect the solar panels to the charge controller, you might risk destroying the charge controller in the process.

Can I connect a solar panel to a charge controller?

If you connect the solar panel to a charge controller first, it may not initialize correctly. After you've connected the charge controller to the battery, it is now safe to connect it to the panels. Out of the junction box of a panel come two cables, a positive and a negative.

How does a solar panel charge controller work?

If you have several solar panels, like on the diagram, the positive cable of one panel usually goes to the negative terminal of the adjacent one. Then, the negative cable of the first panel and the positive cable of the last panel go into the charge controller.

Can you connect solar panels directly to a battery?

First of all, you should know this: You cannot connect your solar panels directly to a battery. When you connect your solar panels directly to your battery, you will damage the battery (lead-acid or lithium). You need a device that measures the state of charge of your battery and charges it accordingly, just like a car battery charger.

What happens if you connect solar panels directly to a battery?

When you connect your solar panels directly to your battery, you will damage the battery (lead-acid or lithium). You need a device that measures the state of charge of your battery and charges it accordingly, just like a car battery charger. The device we are going to use is called a charge controller.

How do I connect a charge controller to a solar array?

Turn the charge controller on: it should be able to measure the charge of the battery. In the user manual of a charge controller, there should be a wiring diagram, which you can consult if in doubt. It's advised to wire the controller to the battery first before connecting it to a solar array.
