Outdoor power usage function

Overview

What is the power or benefit of the outdoors?

The power or benefit of the outdoors is indescribable. It provides us with life skills, a larger perspective, and an appreciation of our natural surroundings that cannot be replicated anywhere else. The majority of these important experiences can happen in our youth through the guidance of our parents, and for many, our dads.

Who uses outdoor power equipment?

Outdoor power equipment is commonly used by do-it-yourself (DIY) enthusiasts and homeowners for residential purposes. End users such as lawn & plant care providers and landscape service providers use outdoor power equipment for commercial purposes, with the most widely used equipment being the lawn mower.

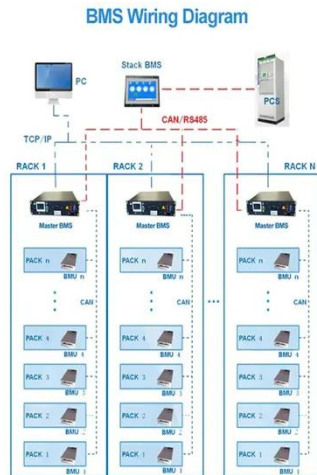

Does indoor unit metering capture internal power consumption?

Otherwise, it is generally assumed that the indoor unit power consumption (which is relatively insignificant unless you are applying high CFM ducted units) is captured as part of the tenant sub-metering for internal power consumption (i.e. lights, plugs, appliances.) Fig 2. Indoor units metering.

Does PPD include a unit's power consumption?

The PPD results will not include the indoor unit's power consumption, which would include the fan of the indoor unit and the power consumed by the onboard electronics. It is generally assumed that this power consumption is accounted for in the tenants or end-users sub-metered power for their internal usage.
