

## SolarTech Power Solutions

# Paris photovoltaic glass model

## Overview

---

Where is a photovoltaic glass façade made?

Onyx Solar has produced a photovoltaic glass façade composed of photovoltaic glass in the attic of the façade of the Freedom building along the famous Admiral Bruix Avenue, in Paris, France. The 313.

What is Photovoltaic Glass?

The photovoltaic glass installed is Amorphous Silicon technology, with medium transparency and will prevent the emission of 40 tons of CO<sub>2</sub> into the atmosphere. The “FREEDOM” building is designed by the PCA architecture studio and includes 17,500m<sup>2</sup> distributed in a garden level, a ground floor, and 9 levels in the superstructure.

Are glass-glass PV modules a good choice?

Glass-glass PV modules (b) do not require an aluminum frame and therefore have a lower carbon footprint than PV modules with backsheet (a). Although photovoltaic modules convert sunlight into electricity without producing emissions, PV-generated solar energy does produce CO<sub>2</sub> emissions during production, transport and at the end of module life.

Do glass-glass solar panels reduce emissions?

In the process, they also found that glass-glass modules enable an additional emissions reduction ranging between 7.5 to 12.5 percent compared to PV modules with backsheet films, regardless of their production location.

Can a photovoltaic system be installed in a European location?

"If I want to install a photovoltaic system in a European location with average irradiation values, I have a great influence on its climate friendliness with the choice of my PV modules," explains Dr. Holger Neuhaus, Head of Department for Module Technology at Fraunhofer ISE.

Do silicon photovoltaic modules produce less CO<sub>2</sub>?

In a new study, researchers at the Fraunhofer ISE have calculated that silicon photovoltaic modules manufactured in the European Union produce 40 percent less CO<sub>2</sub> than modules manufactured in China.
