# Photovoltaic energy storage can still make money

## Overview

---

Does photovoltaic power generation increase energy storage revenue?

The more photovoltaic power generation used for energy storage, the greater the total profit of the power station. However, from the trend chart (Fig. 4), it can be seen that with the increase of energy storage, the growth rate of energy storage revenue is significantly slower than the total revenue growth of power stations.

Can photovoltaic power be used for energy storage?

The electricity generated by photovoltaic power can be freely used without restrictions from policies and other factors. The electricity price for energy storage is always higher than feed-in tariffs. The maximum capacity or demand for energy storage is 250GW per year.

Can photovoltaic power stations use excess electricity?

If photovoltaic power stations want to utilize excess electricity through hydrogen production or energy storage, the cost and profit of hydrogen production and energy storage need to be considered. When the cost is less than the profit, investment and construction can be carried out.

How much money does a photovoltaic power station make?

For example, for an X photovoltaic power station, 90 % of its revenue comes from the sales of electricity connected to the grid. The maximum revenue from the PV plant is 6200 million dollars, at which point the PV is used for grid access, storage and hydrogen production at 372GW, 210GW and 250 GW, respectively.

How to reduce the operating costs of photovoltaic energy storage?

The economic scheduling of energy storage and storage, and energy management of power supply systems can effectively reduce the operating costs of photovoltaic systems . The second issue is the scientific planning and

construction of photovoltaic energy storage.

How does energy storage affect the construction of photovoltaics?

However, from the trend chart (Fig. 4), it can be seen that with the increase of energy storage, the growth rate of energy storage revenue is significantly slower than the total revenue growth of power stations. Fourth, the construction of photovoltaics is mainly influenced by the scale of supporting energy storage.
