Portable lithium battery energy storage module

Overview

What is a lithium battery energy storage system?

A Lithium-ion Lifepo4 Battery Energy Storage System is a large-scale system, such as 300kWh or 500kWh, that stores power when the power is surplus and outputs the stored power to the grid through the inverter when the power is insufficient.

What is the containerized lithium battery energy storage system?

The containerized lithium battery energy storage system is based on a 40-foot standard container, and the lithium iron phosphate battery system, PCS, BMS, EMS, air conditioning system, fire protection system, power distribution system, etc. are gathered in a special box to achieve high integration.

Are lithium-ion batteries suitable for stationary energy storage?

Lithium-ion batteries (LIBs) are popular energy storage system due to their high energy density. However, the uneven distribution of lithium resource and increasing manufacturing cost restrain the development of LIBs for a large-scale stationary energy storage application , , .

What is lithium-sulfur batteries for large-scale energy storage?

The Lithium-Sulfur Batteries for Large-Scale Energy Storage project aimed to develop advanced lithium-sulfur batteries for renewable energy storage with high-energy density, extended service life and operational safety.

What is a solar power backup system (PEB)?

PEB is compact residential power backup. Equipped with wheel, it can be easily to move, plug and play everywhere. It is allowed to leverage solar power for self-consumption during daytime, store the power at night when the utility is generally cheaper and more available and discharge power when needed.
