Product Specifications of Base Station Power Supply

Overview

Can I use the c39280-z4-c707 power supply for my base station?

If you can find the term "C39280-Z4-C707" (s. 2nd image) there, you will be able to use this power supply for your base station. This power supply is compatible with all Gigaset base stations without answering machine. In a few exceptional cases, the power supply can also be used for Gigaset base stations with answering machine.

Is the power supply compatible with all Gigaset base stations without answering machine?

This power supply is compatible with all Gigaset base stations without answering machine. In a few exceptional cases, the power supply can also be used for Gigaset base stations with answering machine. Please check the back or bottom of your base station for compatibility.

What is a multi-output power supply design?

Multiple output designs may also employ a complex regulation scheme which senses multiple outputs to control the feedback loop. Voice-over-Internet-Protocol (VoIP), Digital Subscriber Line (DSL), and Third-generation (3G) base stations all necessitate varying degrees of complexity in power supply design.

What is a 3G base station converter?

In a 3G Base Station application, two converters are used to provide the +27V distribution bus voltage during normal conditions and power outages.

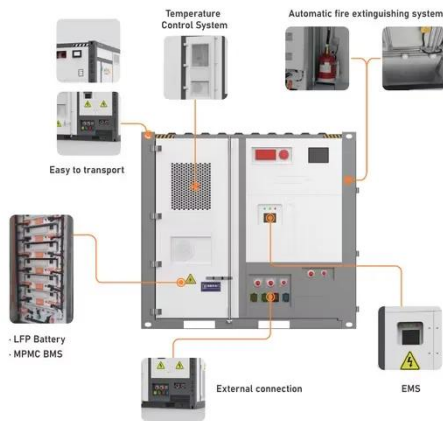

What is a preferred power supply architecture for DSL applications?

A preferred power supply architecture for DSL applications is illustrated in Fig. 2. A push-pull converter is used to convert the 48V input voltage to +/-12V and to provide electrical isolation. Synchronous buck converters powered off of the +12V rail generate various low-voltage outputs.

What is a low profile power supply?

Low profile power supply design usually includes printed circuit board (planar) power transformers and output inductors and surface mount input and output capacitors. Multiple output power supplies are often implemented with a multi-output flyback converter.
