Seamless connection of outdoor power supply

Overview

Can a sespm switch power a device that requires 24VDC?

With the introduction of the optional 24V Passive PoE Module safely and securely installed inside the SESPM, the switch can now also power devices that require 24VDC and do not follow the IEEE PoE standards.

What is a self-enclosed sespm?

The self-enclosed design of the SESPM reduces the challenges, time, and expense of sourcing, installing, and maintaining equipment from multiple sources traditionally needed in outdoor cabinet applications.

How does a sespm switch work?

The SESPM switch's initial configuration is fast and straightforward, using built-in Near-Field Communications (NFC). The SESPM's mobile app transfers pre-configured settings to the switch without taking the switch out of its box or powering it up before sending it to the job site.
