Such CB are obsolete and not used anymore. Construction Such SF6 circuit breaker has a fixed contact and moving contact.

Why do we use SF6 circuit breaker in HV circuit?

They abruptly break the circuit and safely quench the arc. The circuit-breaking part is easy as it is just the separation of contact but the arc that generates afterward which prevents the circuit from breaking and causes damage needs to be quenched as fast as possible. That's where we use SF6 circuit breaker in HV circuit for arc quenching.

Why are SF6 circuit breakers so expensive?

SF6 is an expensive gas so these circuit breakers are costly. Leakage of SF6 from the joints must be continuously monitored. It requires special transportation and maintaining the quality of gas. The SF6 is heavier than oxygen and can cause difficulty in breathing. Recombination and reconditioning of the SF6 gas requires additional equipment.

What is SF6 CB?

The operation of SF6 CB is noiseless. SF6 gas is non-toxic in its pure state. SF6 gas is non-flammable, thus no chance of fire hazards. Since its operation is flawless, it requires less maintenance.
