What is a 500 watt solar water pump?

A 500 watt solar water pump is a 48V DC motor pump with a maximum head of 45~109m (145~355ft) and a maximum flow of 449~1321 gallons per hour. It has an inlet diameter of 3 inch/4 inch and an outlet diameter of 0.75 inch/1.25 inch. This solar water pump can be used for deep well, small fountain, large pond, or water tank applications.

What is a solar drive for water pumps?

A Solar Drive (for water pumps) is a type of electrical converter (essentially solar-powered VSDs) which converts the variable direct current (DC) output of a photovoltaic (PV) solar panel into alternating current (AC) that can be used by a local electrical water pump motor (also still allows for an AC input supply if required).

How to design a solar photovoltaic powered DC Water Pump?

The simplest type of PV system one could ever design is by connecting single or multiple PV modules directly to the DC load as shown in figure 1 below. The overall capacity of the modules is such that it can supply power only during the sunshine hours.

What are the advantages of DC Solar water pump?

Dc solar water pump advantages 1. Permanent magnet BRUSHless DC synchronous motor; Efficiency increase by 15%-20%; Energy saving; Reduce the use of solar panels 2. Copper or stainless steel outlet/connection/cylinder 3. Alloy mechanical seal, long service life, reliable work 4.
