# St Johns Compression Energy Storage Project

## Overview

---

What is Galileo Technologies doing with Saint John LNG?

Galileo Technologies has announced a significant project with Saint John LNG, a fully-owned subsidiary of Repsol. This project aims to address the challenge of boil-off gas (BOG), a part of normal operations in the LNG industry. Traditionally, BOG is compressed and sent back to the pipeline.

How will advanced compression and reliquefaction technology benefit Saint John LNG?

By implementing advanced compression and reliquefaction technologies, the new technology will enhance operational efficiency and improve service to local customers. “This project represents a significant investment in the future of our operations,” said Courtney Jones, General Manager at Saint John LNG.

How does Saint John LNG reliquefaction work?

Traditionally, BOG is compressed and sent back to the pipeline. Through the installation of Galileo Technologies' reliquefaction solution, Saint John LNG will be able to recover and store this resource to serve the market, especially during times of high demand.

Will Galileo's boiler-off gas compression & reliquefaction solutions work with Saint John LNG?

Galileo's Boil-off Gas Compression and Reliquefaction solutions to be operating in near future for Saint John LNG. Galileo Technologies is proud to announce a significant project with Saint John LNG, a fully owned subsidiary of Repsol.

Why is the Saint John LNG project a significant investment?

“This project represents a significant investment in the future of our operations,” said Courtney Jones, General Manager at Saint John LNG. “By optimising our processes and harnessing innovative technologies, we are

poised to deliver greater value to our customers while advancing our sustainability objectives.”.

What is a compressed air energy storage project?

A compressed air energy storage (CAES) project in Hubei, China, has come online, with 300MW/1,500MWh of capacity. The 5-hour duration project, called Hubei Yingchang, was built in two years with a total investment of CNY1.95 billion (US\$270 million) and uses abandoned salt mines in the Yingcheng area of Hubei, China’s sixth-most populous province.
