# The role of RV outdoor power supply

## Overview

---

What is the power supply in a motorhome?

The power supply in the motorhome also sounds complicated at first, but in principle it's easy. Motorhomes or campers usually have two batteries: A starter battery and an on-board battery. They are the storage medium for the energy available in the camper. There are various ways to charge the batteries - but more on this later.

What electrical system does an RV use?

The DC electrical system uses a 12-volt battery that powers most of the basics in the RV, things like lights, the water heater, water pump, carbon monoxide detector, and the refrigerator.

Can I connect my RV to a dedicated AC power supply?

When you connect your RV to an on-grid dedicated AC power supply, you are connecting to a power supply of either 30 or 50 amps. Once connected, running all your appliances, including Air Conditioning, heaters and Microwaves will run without issue.

Does an RV have a battery?

Every RV has either a battery or a series of batteries installed for providing a source of power in the absence of an external power source. Most RV's will come factory with a Deep Cycle Battery. Deep cycle batteries can run the electronic equipment that uses low power, things like the lights, and even some small appliances.

Do campers need power?

Whether running an Air Conditioning, cooking or taking showers, it will require power (and water). Some RV's have basic power sources like the battery and propane tanks, while some others are equipped with generators, power inverters and solar panels for uninterrupted electricity. So, how do campers

get power?

.

What is shore power in a motorhome?

Shore power refers to the power supply for your motorhome via an external power source. This can be the power connection on a campsite or a socket in your garage at home. The big advantage of shore power is that you can conserve your on-board battery and supply the devices in the camper with power directly and independently of the battery.
