

SolarTech Power Solutions

UPS battery cabinet placed close to the ground

easy to install and use

World wide Products

faster charging and discharging

Multiple protection with alarm systems

Can save energy

the battery capacity can be increased freely and flexibly according to the situation of home use.

Rechargeable lithium batteries use safe LiFePO₄

Overview

How do I WIRE an external battery cabinet?

If you purchased an external battery cabinet, an electrician must wire the battery to the UPS as described in Chapter 7, “External Battery Cabinet Installation.” Continue to the startup section in the Eaton FERRUPS FE/QFE UPS (500 VA–18 kVA) User's Guide. Hardwired Installation. Page 6 Battery Cabinet Installation” for wiring connections.

Can a battery be installed in a cabinet?

This component can disturb the operation of certain protection devices, notably RCDs used for the protection of persons. (see Fig. N23) All installations satisfy the applicable requirements because the equipment is housed in cabinets providing a degree of protection IP 20. This is true even for the battery when it is housed in a cabinet.

Where should the ups be installed?

The UPS should ideally be installed close to the loads. If the distance between the load and the UPS is greater, we must take into account the voltage drop based on the length of the cable and take appropriate measures, such as oversizing the cable.

Where should a battery protection device be installed?

Install battery protection devices close to the battery, ideally in the battery rack or in a nearby enclosure. If multiple battery banks are used, it's recommended to have a common isolator with a fuse or an MCCB (Molded Case Circuit Breaker) and an individual battery isolator for each battery string.

Where should a UPS terminal be located?

Terminals are typically located at the bottom, and many UPS units have provisions for bottom cable entry. Due to limited space and bending

requirements, it's best to use single-core flexible copper cables. If armored aluminum cables are used, elevate the UPS system to ensure the required cable bending radius.

How to choose the right cables for UPS installation?

Choosing the right cables for UPS installations is critical. Incorrect cable selection can lead to problems like overheating, fire risks, and early failure. It's also important to pick the best installation method and routing. Use the same cable size for input and output, ensuring it can handle the thermal current continuously.
