# Uninterruptible power supply connection in the computer room

## Overview

---

What is an uninterruptible power supply (UPS)?

Many businesses opt for an Uninterruptible Power Supply (UPS) for vital backup power when the mains or regular supplier fails. Having an Uninterruptible Power Supply in place and properly set up means, as the name suggests, no interruption in power before your standby generator can kick in.

Where should your uninterruptible power supply be located?

Your uninterruptible power supply (UPS) must be positioned somewhere safe, secure and accessible. In this article, we explore the fundamentals of UPS room layout and the things you need to consider when deciding where to locate your essential power protection systems.

How do I install an uninterruptible power supply?

An uninterruptible power supply should be installed with an external wall mounted UPS maintenance bypass switch.

How do I size a room for an uninterruptible power supply?

The most important factor in sizing a room for an Uninterruptible Power Supply is space around the equipment. You need to provide room for air to circulate and ventilation, as well as for manoeuvring around for generator maintenance and servicing.

Why do businesses need a UPS system?

UPS systems are important for computer rooms and other areas with sensitive equipment. They're meant to supply short-term power so there isn't a sudden outage. They can also cover for short-term power lags. There are many reasons for businesses to install an uninterruptible power supply (UPS).

Should a ups be connected to a power supply?

It is therefore sufficient to keep the UPS connected to the power supply, even if not in use, so that the batteries remain alive and active . The UPS must always be connected to the batteries and report any disconnections or malfunctions promptly so that it is able to function correctly .
