

## SolarTech Power Solutions

# Western European Home Energy Storage

## Overview

---

Is the home storage market growing in Europe?

The market for home storage is growing at a record pace across Europe. For example, in its latest market study for residential energy storage, SolarPower Europe calculates an increase in storage capacity of 71% (3.9 GWh) in the most likely scenario for the past year.

Which country is promoting the development of residential energy storage?

In terms of residential energy storage, the Polish government has launched Moj PRD 5.0 subsidy program to encourage the development of residential energy storage. Sweden's installed battery storage capacity is expected to grow from 503 MW in 2023 to 3.8 GW in 2030, with high revenue levels in the ancillary services market driving the market growth.

Which European country has the best home storage market in 2021?

In the European country ranking of residential storage markets, Germany once again held the undisputed top position in 2021 with a market share of 59%. In a forecast up to 2026, SolarPower Europe expects Germany to remain the undisputed market leader in home storage during this period.

What is the future of energy storage in Ireland?

Future market potential is concentrated in pre-sheet energy storage and energy storage co-located projects, residential and commercial storage market space is not large. Ireland's battery storage capacity is expected to grow from 792 MW in 2023 to 3.9 GW in 2030, mainly in the pre-table storage market.

How many residential energy storage systems are there in Germany?

By September 2023, Germany has installed more than 1 million residential energy storage systems and expects to add more than 400,000 units per year in the future. Volatile energy prices and the popularity of photovoltaic self-use

have driven demand for residential energy storage, which is expected to continue to grow through 2030.

How much storage capacity will Europe have by 2026?

By the end of 2026, the European industry association even expects total storage capacity to increase by 300% to 32.2 GWh, equivalent to 3.9 million European households optimizing the self-sufficiency of their power supply and limiting their electricity costs.
