# What does 20 watts of solar photovoltaic panels mean

## Overview

---

A 20-watt solar panel is a compact PV module that can generate 20 watts of DC output under standard test conditions (STC). What is solar panel wattage?

Solar panel wattage refers to the amount of electricity a panel can produce under ideal sunlight conditions. It is one of the most important specifications to consider when choosing a solar panel for home use. Measured in watts (W), this number directly affects the solar panel energy output and efficiency of your system.

How much power does a 20 watt solar panel generate?

So for, say, you receive 5 to 7 hours of sunlight daily for your 20-watt solar panel, then the total power (KWh) generation for this solar panel would be between 100 to 140 KWh daily. Thus, the power a solar panel generates will vary depending on the daily sunlight hours and how much your panel receives.
