# Where can I find batteries for home solar lights

## Overview

---

What kind of battery do solar lights use?

While there are a lot of different battery types out there to pick and choose from powering solar lights today, the most popular options are definitely nickel-metal hydride and nickel-cadmium options. Both of these batteries have significant advantages over the older, out-of-date lead acid-style batteries that they replaced.

Which solar battery is best?

Nickel-metal hydride (NiMH) and nickel-cadmium (NiCd) are great options for solar batteries, but NiMH batteries edge out NiCD since they are more environmentally friendly. Lithium-Ion (Li-ion) batteries aren't always the best choice, mainly because they drain more quickly in hot temperatures.

Are solar lights rechargeable?

The vast majority of "off-the-shelf" batteries that you find in your local grocery or department store are going to be rechargeable. All you really need to consider is the size of battery in your solar lighting. AA, AAA, etc. It is possible that you have solar lighting with built-in batteries, which makes changing them more difficult.

Should I buy a battery for my solar lights?

Before buying a battery for your solar lights, it's important to check the voltage and amperage they need. For instance, if your light needs 3.7V and 2A, your battery should match these requirements. If the battery's voltage is too high, it could harm your lights. If it's too low, the lights won't get enough power to function properly.

Do solar lights need a battery charger?

Since the batteries used in solar lights are generally rechargeable batteries, you can use a battery charger that is designed to work with the same size

battery (usually AA) to refill them. Using a charger is helpful if your lights have limited access to the sun or if they have been in storage.

Can you replace a battery with a solar light?

The voltage must be exact when you replace your batteries for solar lights. If the existing battery is a 1.2V, you must replace it with a 1.2V battery. If the existing battery is a 3.2V, you must replace it with a 3.2V battery. Voltage is not interchangeable, since the circuitry is different.
