Overview

What are the different types of solar pumps?

There are several types of solar pumps, such as solar photovoltaic pump, solar thermal water pump and domestic hot water pump. Solar pumps are generally submersibles or surface, and have multiple applications, from irrigation in crop areas, drinking water systems, to installations in water projects for livestock.

How to choose a solar water pumping system?

The type of solar water pumping system: borehole/well (submerged), floating or surface will depend on the water source. If the source is a borehole (proposed or existing) or deep well, then a submersible pump that fits the borehole or well should be selected. If the water source is a river, then a surface pump should usually be selected.

How do you design a solar water pumping system?

When designing a solar pumping system, the designer must match the individual components together. A solar water pumping system consists of three major components: the solar array, pump controller and electric water pump (motor and pump) as shown in Figure 1.

What is a solar water pump installation?

A solar water pump installation is a fairly basic system and typically consists of a water pump (submersible or surface pump), solar panels, and tubes. Most solar water pump systems don't use batteries. You should be aware that different water pumps are used for different applications: Usually, the water level will determine which pump to use.

How do I choose the right type of solar pump?

Choosing the right type of solar pump will depend on the intended use. There are two main types of solar pumps: Submersible solar water pump: These pumps are ideal for extracting water from significant depths, such as wells or

cisterns.

What are the components of a solar water pumping system?

A solar water pumping system consists of three major components: the solar array, pump controller and electric water pump (motor and pump) as shown in Figure 1. Note: Motor and pump are typically directly connected by one shaft and viewed as one unit, however occasionally belts or gears may be used to interconnect the two shafts.
