Wireless outdoor AP base station settings

Overview

How do I configure a base station?

Configuring the base station as an access point. A wireless PC can use an Internet browser to initially configure the base station. Unlike the BSCU, when you configure the base station by using an Internet browser, the radio card parameters are not automatically changed to match the base station settings.

Can a wireless PC configure a base station using an internet browser?

A wireless PC can use an Internet browser to initially configure the base station. Unlike the BSCU, when you configure the base station by using an Internet browser, the radio card parameters are not automatically changed to match the base station settings. Before using the Internet browser, the wireless PC must be associated with the base station.

How do I remove a wireless access point from a wired access point?

Includes details such as the downlink Access Point (by specified name or MAC address), signal strength, and the option to remove the wireless Access Point from the wired Access Point by clicking remove. Note: Downlinks will only be visible under the Details tab when a wireless Access Point is connected.

Should APS be mounted on a pole?

Pole mounting is a good option when installing the APs away from the buildings, which is more common in a wireless mesh system where no cables need to be pulled to each location. It's ideal for providing a 360° overall coverage for your premises, but if the access point is mounted too close to the pole, the RF will be severely attenuated.

Do you need an outdoor access point?

For outdoor deployments, an access point that is fully against dust and water ingress is needed. To survive the harsh environment outdoors, the access points must support an IP rating of IP65 or more, or irreversible damages

might arouse due to water penetration.

How do I connect a wireless access point to Unifi controller?

Access Point - Isolated When an Access Point is in an Isolated state, a connection to the UniFi Controller software can be reestablished by reconnecting the Access Point to the router or by establishing a wireless uplink to a wired Access Point. See “Wireless Uplinks” on page 32 to find, select, and connect to a wireless Access Point.
