Working Principle of Outdoor Integrated Base Station

Overview

How does a base station work?

It usually connects the device to other networks or devices through a dedicated high bandwidth wire of fiber optic connection. Base stations typically have a transceiver, capable of sending and receiving wireless signals; Otherwise if they only send the trailer it will be considered a transmitter or broadcast point only.

What are the components of a base station?

Power Supply: The power source provides the electrical energy to base station elements. It often features auxiliary power supply mechanisms that guarantee operation in case of lost or interrupted electricity, during blackouts. **Baseband Processor:** The baseband processor is responsible for the processing of the digital signals.

Why do we need a base station?

Technological advancements: The New technologies result in evolved base stations that support upgrades and enhancements such as 4G, 5G and beyond, its providing faster speeds with better bandwidth. **Emergency services:** They provide access to emergency services, so that in case of emergency, people can call through their mobile phones.

What are the properties of a base station?

Here are some essential properties: **Capacity:** Capacity of a base station is its capability to handle a given number of simultaneous connections or users. **Coverage Area:** The coverage area is a base station is that geographical area within which mobile devices can maintain a stable connection with the base station.

How does a base station RF work?

The base station's RF circuitry is housed in a small outdoor module known as a

remote radio head (RRH) or remote radio unit (RRU). RRH performs all RF functions such as transmit and receive functionality, filtering and amplification. It also has analog-to-digital or digital to analog and digital upconverters.

What is the zxg10-bss base station subsystem?

The ZXG10-BSS Base Station Subsystem provides and manages radio transmission in GSM, and it is composed of the ZXG10-BSC Base Station Controller and the ZXG10-BTS Base Transceiver Station. ZXG10 OB06 is one of the ZXG10-BTS series of base transceiver stations, and is an integrated outdoor BTS for GSM.
